

I personally utilize XM radio on my boat simply due to the fact that I do not receive regular OTA (over the air) broadcasts while on the water.... it is nice to have both traffic and weather updates. I can better plan the trip home or the length of the outing with weather and traffic type information in a convenient method that I am likely already listening to. Please do not allow the NAB to utilize the Federal government's resources to forge the battle that should be waged with good ol fashioned competition and a superior product.
